

The Advance line of straight-line digital reciprocating sprayers includes the popular SR-1155; its little brother, the SR-1145; and its big brother, the SR-1165. They fit 300- to 1,800-ton DCMs. These feature-laden workhorses have been designed to stand up to rigorous work schedules with minimum maintenance.

Manifold capacity ranges from 75 pounds—SR-1145 and SR-1155—up to 125 pounds on the SR- 1165.

The Advance sprayer has two axes. One is fully programmable to position the spray manifold into the die area. The second axis has an 8-inch horizontal travel and can be operated from the control panel or a handheld remote to adjust the reciprocator for different cover die thicknesses.

The horizontal slide base with a pedestal mount is useful for many applications. For some applications, the pedestal mount can be eliminated. Various risers are also available to avoid obstructions like water lines

A gear reducer is mounted on the top of the slide base. The main drive arm carries the vertical

snout with manifold attached to the end into the die. The snout has a 12-inch adjustment to allow different spray manifolds to match the die being sprayed.
